Iteration Retrospective

Sameer Al Harbi

Jan 04 - Jan 14, 2023 — Iteration 2

1 Summary

During the Second Iteration, development has ramped up and a lot of the most important user stories were made. The end of this iteration also coincided with the end of the winter vacation and start of semester 2. In total, 3 user stories + 1 task was completed with a sum of difficulty score of 16.

2 Key Points

- This was a much more productive iteration than the last one, although it was slightly longer at 11 days vs the 7 days but it was because the process was finialised that lead to the biggest boost in productivity

- Allow extending iteration lengths, This iteration was longer but it allowed a logical atomic conclusion to the work done which otherwise would need to be carried over.
